

PerioVision ePrescribe

Now you can send prescriptions electronically from PerioVision to retail and mail order pharmacies with just one click.

Henry Schein PerioVision ePrescribe automates the process of writing prescriptions and transmitting them to pharmacies, while preventing potentially dangerous drug-to-drug interactions, drug allergies, dosage errors and other problems that can occur when writing prescriptions on paper.

Accessible instantly, from anywhere, with no downloads or new hardware required, PerioVision ePrescribe is a web-based means for oral and maxillofacial surgeons to send prescriptions electronically to retail and mail order pharmacies with one click from within the PerioVision software—and maintain all information in the PerioVision EHR.

Convenient for Patients, Convenient for You: Store and Report from PerioVision EHR

With PerioVision ePrescribe, your practice can now create and send electronic prescriptions, including schedule II controlled substances, to a pharmacy at the point of care. PerioVision ePrescribe launches from PerioVision, and all drug information for the patient is stored back in PerioVision EHR. This means you can run prescription reports from PerioVision ePrescribe and access a patient's history from anywhere. This means your office staff can work faster and more efficiently. Simply put, you and your staff can streamline operations to provide better care and save time doing it.

With PerioVision ePrescribe, you can:

- Electronically prescribe controlled substances (EPCS), including Schedule II prescriptions, in accordance with new Drug Enforcement Agency (DEA) requirements. Using an electronic prescription solution from a certified provider means that your practice can continue to prescribe medications common to oral surgical procedures without completing complex forms.
- Speed the medication process when you send and track electronic prescriptions with any participating pharmacy.
- Provide patients with a better experience when you store their favorite pharmacy and automatically send prescriptions before the patient leaves your office.
- Improve patient safety with automatic drug interaction checking, dosage checks, adverse reaction checks and duplicate therapy checks
- Simplify prescription renewals by receiving and managing refill requests from pharmacies online, with accessible patient medication history

PerioVision ePrescribe Helps Protect Patient Safety

Currently, the inefficiency and health hazards of handwritten prescriptions can undermine your responsibility to provide safe and effective care. If you are using paper prescriptions, providing reliable information and treatment can require consulting several different systems and records, often while patients wait on the phone.

PerioVision ePrescribe gives you the power to instantly verify patient eligibility, medication history, drug and allergy interactions, and patient-specific formularies with just a few clicks. By working directly with the pharmacy, you not only provide a seamless experience for patients, you reduce the likelihood of paperwork errors. PerioVision ePrescribe helps prevent potentially dangerous drug-to-drug interactions, drug allergies, dosage errors and other problems that can occur when writing prescriptions on paper.

PerioVision ePrescribe Facilitates Compliance

PerioVision delivers the industry's first integration with Allscripts ePrescribe, making it the only fully integrated web-based e-prescribing solution available for periodontists.

Powered by Allscripts. Provided for Your Practice by PerioVision

Allscripts is the world's leading provider of electronic prescription technology for the medical industry. PerioVision is proud to be the first oral surgery-specific practice management software to leverage the power of the world's leading e-prescription system for oral and maxillofacial surgeons.

PerioVision ePrescribe Features

When you get a call from someone requesting a new prescription, you can know within seconds whether the caller is a patient. With PerioVision, you can search the patient's name and their essential information, including:

- New retail and mail-order prescription routing and renewal
- Instant prescription benefit eligibility and formulary
- Comprehensive prescription benefit reporting
- Full prescription history for any patient
- Drug interactions, correct dosages, correct dosages, adverse reactions and duplicate therapies
